## REVIEWS OF OUR GRADUATES:

### Emmanuel Owusu-Ansah

I remember Elena Alexandrovna taught us how to prepare all kinds of budgets i.e. (sales budget, purchases budget, production budget, fixed assets budget and master Budget etc) using microsoft Excel. Apart from the Excel, the Government of Ghana use a software called GIFMIS (Generated Integrated Financial Management Information System) which is almost similar. I can say that what KubSU taught us has been helpful. Another one is the application of the theories of Public Private Partnership (PPP) by Elena Votchenko. Before the Government undertake any project with partnership, we check if the project is viable and cost effective by comparing budgeting with actual cost. I apply most PPP principles at the work place. Again, the course Negotiation is also helpful, that is, we educate the Government consultants on how to negotiate for cost of projects enhance, negotiation skills. Marketing theories by Ilya Bogdashev is also applied at the Ministry of Local Government in Ghana especially at the Budget Department.

### Alexey Titov

As a graduate of faculty of economics, I had fewer problems studying here than my groupmates had who came from different study directions. The material was also new for me but economic background helps to understand all better. I've never met my new professors before but they were welcoming to everyone, helping and answering every question we got. Our entire group had an access to the university information sources like the library and free Internet connection. We had also access to extra curricular activities, which some of us used for the self-development. The first course ended pretty well and I was pleased with all results I gained. I've written a part of my master's thesis, took a part in a couple of events and additional classes (Business School KubSU, PwC lectures, etc.).

### Andrey Perechnev

At the outset, I'd like to say that the Master's program "Economics and Management" it's a good choice for those students who are looking for something challenging and different. This program enables you a great opportunity not only to enhance your professional skills and competencies in economics but also to improve your English. Therefore, in my case, I've got that all. I am forced to admit that the general level of knowledge given within the framework of this course is very plentiful and of high quality regarding university.
